	Urgent	Not Urgent
Important	Do - (Your MVP) 1) Call the Pointercrate API in Python 2) Verify the API call 3) Send the API call results to a .json file 4) Use React and Vite to project the results of a singular level.	Schedule - (For v2.0+) 1) Cron job call to update the list of records that satisfy the list % requirement, but are not 100% for each level 2) If a level were to fall out of the top 75, find the new level insertion and get its data 3) Custom coloring based on how frequent players die to a certain %. 4) Use Vercel for hosting
Not Important	Delegate - (Use a library) 1) D3.js for Death Distribution maps 2) React Router for individual pages. 3) Link level Verification to React	Delete - (Cut it) 1) Use of NoSQL 2) Historic Chokepoint trends 3) Use of FastAPI for backend
